

View from Roman looking out at the sky

- Orientation shown in sky projection and in SCA FITS images. The x & y axes are shown in both maps to illustrate the mapping.
- Note that the parity is flipped between the FITS images (as displayed in ds9) and the sky.
- Note that outer row of SCAs (#3, 6, 9, 12, 15, 18) is rotated 180° relative to the others to minimize gaps.

corners with numpy array indices
(recall row # is first)

only data[4:-4, 4:-4] are active pixels

data[4095, 0]

data[4095, 4095]
